

Revell Research Systems

Revell Research Systems was established in 1985 as a management and technology consulting practice, providing impartial advice to a select number of professions.

We specialise in four disciplines: IT strategy development, systems engineering, networking and software development. We transfer our knowledge and skills in these four areas to our clients by advising them, training them, supporting them or executing the required work for them. The exact blend of these services is designed to match the client's precise needs.

Our Aim

We are a young and dynamic consultancy, determined to deliver our services with unparalleled professionalism and uncompromising quality.

Our clients only ever receive totally independent, unbiased and impartial advice from us. We do not accept any inducements to recommend a particular product or service over another. We only sell our expertise.

REVELL RESEARCH SYSTEMS

Management and Technology Consultants

Our Disciplines

Revell Research Systems specialises in four different, but closely related disciplines: strategy development, systems engineering, network engineering and software development.

Strategy Development

Organisations need to establish clear strategies about how their investment in information technology is going to make a difference to the way they compete.

We help clients gain competitive advantage from information technology by providing them with insight into recent developments, offering thought-leadership and by helping them to develop suitable strategies.

We can also help them evaluate and select the necessary software and to test the feasibility of any potential solutions.

Systems Engineering

It is becoming increasingly important that a business can rely on its servers and workstations. If it can't count on these components functioning, it often has an adverse effect on how they actually perform.

We have deep technical expertise in both server and workstation environments to ensure that these assets can be counted on when it matters. We can help clients install, maintain, configure and continue to operate their server and workstation software.

Network Engineering

Networking is the glue that holds much of the modern enterprise together and links it with its customers and suppliers. It is consequently important to get it right!

We have considerable experience in networking organisations together, whether they occupy a single site or need to join their offices together with those of their clients and suppliers.

Software Development

Businesses often need to build custom software applications or to develop interactive web sites for use either internally for their staff or externally for their clients and suppliers.

We develop both traditional applications and interactive, database-driven web sites.

Our Services

Revell Research Systems delivers its expertise and knowledge through our capabilities in consulting, training, support and implementation to deliver our knowledge in these areas to our clients.

We blend these four approaches to provide each client with what they uniquely need.

Consultancy

Although organisations often have the resources to execute a project, what they really need is expert advice on how to proceed.

We can provide consultancy in any of our four core disciplines to clients who need to access our experience and expertise in these areas. We have strong consulting skills that ensure we successfully transfer our knowledge to our clients in a way that is valuable to them.

Training

Successful organisations invest heavily in their people. They know that their staff are key to sustaining competitive advantage.

We offer high quality training in developing information technology strategies, systems engineering, networking and software.

Support

Sometimes organisations need more than just advice and training. They need someone to work alongside them over a period of time, transferring their skills and expertise to the organisation in the process.

We have strong mentoring and coaching skills, which we use to strengthen and develop client staff. We can provide ongoing support in any of our four specialist disciplines.

Implementation

Some organisations do not have the time or resources to do the work that needs to be done. Often they have no interest in understanding how it's done either - they just know it has to be done and that it has to be done well.

We can work in a quasi-board role developing IT strategy. We can look after all aspects of an organisation's systems and networks; and we can develop traditional applications and web sites.
